

myLab

The online management of calibration gases

myLab is the Messer online portal for specialty gas customers. It provides all relevant quality and safety information on the pure gases and calibration gas mixtures that you are using, and so supports you in the administration of your cylinder gas products.

The access to myLab provides a clear overview of your products and the option to download the certificates and safety data sheets for your calibration gas mixtures as well as the specifications and safety data sheets of the standard products. Thus, myLab contributes to minimize the use of paper-based documents.

At a glance, you can see the production and the expiry date of your gas mixtures. The color markings indicate if the stability of a gas mixture will expire soon or has already expired. In addition to that, myLab provides an automatic e-mail service, which informs you in advance, so that you can reorder products early enough. For this purpose, we recommend the re-order function of myLab. All these features make it simple and convenient to assure the permanent availability of your required gas mixtures.

Functionalities of myLab – Your benefits

- Display of your customer data and personal contacts at Messer
- Clear overview of all individual gas mixtures and standard products in your laboratory (Folder management possible)
- Download option for certificates, product data sheets and safety data sheets 24 hours a day
- Display of the production and expiry date of calibration gas mixtures
- Indication of expired calibration gas mixtures
- Info-Button and Excel download providing all relevant order and mixture information
- Simple re-order function
- Automatic e-mail notification service

The certificates of the calibration gases according to ISO 6141 contain all relevant information on the gas mixture composition and its uncertainty, the stability period as

well as the container. You will find the specifications of the particular product in the data sheets of the standard products. The safety data sheets provide all relevant information on the properties and on the safe handling of gases.

Your access to myLab

Please contact us if you are interested in using the myLab service for your laboratory or you desire more information. We are looking forward to the personal contact with you.
